Profiles side-by-side **item's Parallel Fastening Element 8**

Need to link prefabricated partition sections to each quickly, or bolt an additional component onto a profile frame without machining or add a Light Fitting 55W to a Profile? These tasks can all be solved easily with the new Parallel Fastening Element 8 in the item MB Building Kit System.

It really could not be easier. The Parallel Fastening Element is simply clipped into the lateral Groove of the first Profile, and the groove of the second Profile is then pressed into place on the other tongue of the Fastening Element. Just a twist of the screwdriver, and the Fastening Element is tight.

Only a few Parallel Fastening Elements 8 are needed to produce a remarkably safe, solid connection between two parallel Profiles in Line 8. It is possible to cover the resulting gap between the Profiles with a Cover Profile specially designed for the purpose to create a smooth, uninterrupted aluminium surface. Front-facing Caps prevent dust entering the gap and ensure a tidy finish.

Product benefits

- connection between parallel Profiles by means of easy-to-handle Fastening Elements
- application: first click in place, then fix (from the front) – quickly and safely!
- depending on the degree of stability required, a number of Fastening Elements can be used
- particularly attractive design: the gap between the linked Profiles can be neatly closed off using special Cover Profiles and matching Caps
