Smart helpers

item are, once again, launching many new ideas at the Hanover Exhibition 2002 in the context of their MB Building Kit System.

A new design of Face Fastening Set provides a range of load-bearing, crossover points with optimum angular precision for Profile constructions, a Pin Lock for Sliding Doors supplements the highly versatile existing range of sliding door applications and the new, universal angle brackets open up numerous attachment options.

(Figure: 8-0230c4.tif)

Often these are small details designed to make the tasks of the production machinery designer that much easier. Their innovative skills have clearly been focussed this time on smart detail solutions. Whether it is workplace concepts using the new Tool Holders, the Face Fastening Elements already mentioned or the universally applicable Hinge for small doors, the solutions offered are all based on day-to-day practical applications.
