New Column Profile D110

In future, tables and workplaces in all shapes and sizes will be even easier to design and build using the item MB Building Kit System. At the same time, a range of new components are available to supplement the Building Kit System and make it easier to apply to hitherto unimagined applications.

The new Column Profile D110 can, for example, be used as either a table leg or as a central column. Its circular cross-section and internal mounting points provide both rigidity and an attractive appearance. A key feature, however, is its integrated Conduits allowing cables to be fed neatly and virtually unseen to the table top. item's new Column is not only suited to tables and worktops, however, it is the ideal choice for stages and exhibition booth technology.

(Figure: 8-0221c4.tif)

If what is required is a more slim-line table leg, nothing could be better than the round Profile 8 R26-270° which can be connected to e.g. a table frame via its integrated Profile Groove. But, once again, the versatility of the system is apparent. It can equally well be used as a handrail or as an attractive design Profile on Enclosure & Guard Systems.

(Figure: 8-0218c4.tif)

Well thought-out elements such as Brackets or fixing flanges provide all the additional attachment options required for fixing item Profiles to each other, walls or other surfaces.
