### Customised sound booths and machine guarding

Purpose designed sound booths and machine guarding can be quickly and economically manufactured utilising the extensive range of double glazing profiles and sound attenuation panels in the item range of machine building products. Noisy production machines such as bowl feeders need to be adequately soundproofed to comply with current workplace legislation. Effective soundproofing can also incorporate guarding, while still providing easy access for setting up, component filling and general maintenance of machines.

The double glazing aluminium profiles are manufactured to close tolerances, together with associated accessories and attachments also produced to high standards of finish and build quality. Booths and guards can be manufactured as self-build projects, or specifications provided for a complete design and manufacture service undertaken by item.

The availability of a wide range of integrated accessories and fittings, designed to achieve high quality project builds, is the basis of worthwhile economies that can be achieved with the item range. Users do not have to out-source or manufacture items, which may prove costly in both material and man-hours expended, and can also reduce the overall aesthetic appeal of an otherwise prestigious projects.
