Convenient and safe: new Handles & Locks for the Integrated Lock System

Launched only a year ago, the system has already taken the market by storm. item's Integrated Lock System has proved to be highly popular for fitting safe access doors to Enclosure & Guard Systems. This is no doubt because of the integrated, protected assemblies inside the Profile in Line 8 on the one hand and the myriad of options available for using this lock as a pawl or rod lock.

The new Handles & Locks make the integrated lock system even more adaptable to the needs of customers: in the context of the Hanover Trade Fair 2004, item will be launching a two-way key bit and two versions of a new twist knob. While the two-way key bit is intended to be used where access is to be restricted to a defined group of people (e.g. electrical installations), the twist knob is the more visually appealing option and ergonomically far neater to handle: for example on doors and flaps intended for general access. Doors that are to be opened from either side can also be fitted with twist knobs. The set includes a drive rod of the appropriate length.

The lockable version locks the twist knob within the rose. This system is designed only for access from one side.
