### **“Ergonomics and economy at a glance” – item telescope supports** item product innovation: Adjustable plant equipment with telescope supports

Telescope supports allow the economic implementation of basic ergonomic requirements. They facilitate the adjustment of tables, supply shelves and gravity conveyors in goods supply to the individual person at work.

The item MB Building Kit System now features a sturdy telescope with adjustable bush bearings: Based on the profile cross-section 80x40 mm, extendable supports free from play are easily available in any length and range. The inner profile is released via a spring-loaded locking pin or clamp lever, the telescope halves adjusted to the new overall length and then refixed. This allows for the quick and easy adjustment to table heights, screen positions or rack picking heights without mechanical intervention. A telescope adapter plate is available for all connection types and saves time-consuming adaptation or special constructions.

**Solingen-based item Industrietechnik GmbH develops and supplies the MB Building Kit System, which enables individual solutions to be created for all sectors of industrial equipment construction. The Building Kit System is based on aluminium profiles, a perfectly matched connection method and versatile functional components.**
